

# REOHM series 155 - Combination

Max. continuous power: 30.000 W

## Unique Selling Point

- EMC cables and screw connections
- Easy installation
- Suitable for the use with any frequency drive
- Compact modular structure
- High protection rating up to IP 65
- Good heat dissipation
- 4-hole fixing for easy assembly

## Description

As BW (Braking resistor)

When an electric machine operates as a generator (Electromotive brake), the brake resistor protects the machine from a voltage rise in the intermediate circuit. The current reduces the speed of the machine.

As R (Charging resistor, damping resistor, filter resistance, etc.)

The charging resistor is a current limiting resistor for the charging and discharging of capacitors and limits for example the current flowing into the intermediate circuit capacitor inrush current. For this the device must be designed for a high single pulse energy and nominal voltage. The inductance of the resistor contributes to limit the inrush current, so wirewound resistors are the right choice.

Maximum energy with minimum space

- This braking resistor of the REOHM series is very compact with high capacity
- Maximum energy is provided in smallest space and very high protection rating
- The resistor is to be assembled vertically with the terminal box at the bottom
- Sufficient convection is to be ensured
- Ratings higher than 22kW require a separate terminal box
- Test voltage: 2,5 kV AC (at 900 V rated voltage)
- Ambient temperature: -10...+40°C
- Max. temperature: >300°C

Optional

- With temperature switch
- Cover for protection against high surface temperatures

## Technical Data

- Resistance values : 0,8 - 820 Ohm
- Continuous power : 4000 - 30000 W
- max. operating voltage : 900 V

## Circuit example

# REOHM series 155 - Combination

*Max. continuous power: 30.000 W*

## Technical data

Type	Resistance value R [Ohm]	Continuous power P [W]	max. operation voltage U [V]
155 / 4000	10-200	4000	900
155 / 5000	6-500	5000	
155 / 6000	4-600	6000	
155 / 7500	3-600	7500	
155 / 9000	2,1-750	9000	
155 / 10000	2,1-820	10000	
155 / 12000	2-740	12.000	
155 / 15000	1,5-700	15.000	
155 / 18000	1,2-630	18.000	
155 / 22000	1-560	22.000	
155 / 24000	0,9-580	24.000	
155 / 27000	0,8-600	27.000	
155 / 30000	0,8-600	30.000	

Higher power ratings on request

The ratings apply for 100 % duty cycle and free access and exit of cooling air.

In general: Is the ambient temperature higher than 40 °C, the continuous power must be reduced by 5 % per 10 K temperature rise.

# REOHM series 155 - Combination

Max. continuous power: 30.000 W

## Dimension drawing

The designs below show the resistors as IP54 / 64 / 65 with a terminal box and cable gland. With IP20 they are provided with terminal and wires.

## Design IP 20

# REOHM series 155 - Combination

Max. continuous power: 30.000 W

## Dimensions

Type	L1 [mm]	L2 [mm]	B1 [mm]	B2 [mm]	H1 [mm]	H2 [mm]	D [mm]	Cable gland	Terminal	Design

Other fixing dimensions possible

## Load diagram

The power ratings apply for continuous duty. The power ratings can be increased in short-time operation in function of duty cycle by multiplication with the relevant factor from the diagram below or according to the formula as follows.

$$P_{max} = \frac{P * 100}{ED[\%]}$$

$P_{max}$  = Maximale Impulsleistung

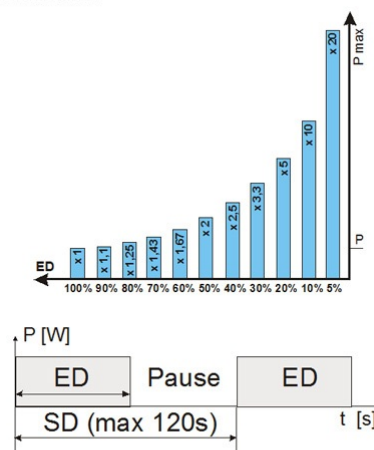

$P$  = Dauerleistung bei ED=100%

$$ED[\%] = \frac{ED[s]}{SD[s]} * 100$$

ED = Einschaltdauer

SD = Zykluszeit max 120 Sek.

Überlastfaktor

# REOHM series 155 - Combination

Max. continuous power: 30.000 W

## Touch protection

## Dimensions of touch protection
